

Dian Jiao

21 West End Avenue, New York, NY, 10023 | dj2531@columbia.edu | (617) 651-7648 | [linkedin.com/in/dianjiao1995](https://www.linkedin.com/in/dianjiao1995)

EDUCATION

Ph.D. in Economics, **Columbia University** New York, NY

Aug. 2018 – May. 2024 (expected)

Research fields: Development Economics, International Trade, Applied Microeconomics

References: Eric Verhoogen (chair); Jack Willis; Michael Best; Vikram Pathania

Dean's Fellowship, 2018-19; Weatherhead Fellowship, 2018-19; Dissertation Fellowship, 2022-23

B.A. in Economics and Mathematics, **Vassar College** Poughkeepsie, NY

Sep. 2013 - May 2017

Graduate with General and Departmental Honors, Eleanor H. DeGolier Fellowship (top of the class)

GPA:4.0/4.0

TECHNICAL SKILLS

Causal Inference, A/B testing, Python, SQL (Amazon Redshift, Google BigQuery), STATA, R, MATLAB, GIS, Git, AWS S3, AWS SageMaker, Google Cloud Platform, LaTeX

WORK EXPERIENCE

Amazon.com, Inc., Economist Intern

June 2023 - September 2023

Core Artificial Intelligence Team (manager: *Vikram Pathania*)

- Collaborated with engineers and scientists to improve models and data pipelines handling 60M + data points daily
- Developed data pipelines to integrate internal ASIN-day-zipcode sales with external zipcode-level datasets (Stata, R, and SQL)
- Analyzed hurricane impacts on Amazon sales across U.S. zip codes by income, leveraging advanced causal inference methods (*Triple Difference*, *Matching*, and *Synthetic diff-n-diff*).
- Communicated complex data insights for non-technical, with upcoming publications in leading media and academic journals.
- Developed an automated Stata program for event study plots, optimizing future Triple Difference data projects.

RESEARCH EXPERIENCE

Bank Expansion, Firm Dynamics, and Structural Transformation: Evidence from India (with Marshall Mo)

Conference Presentation: Webinar Series in Finance and Development (WEFIDEV), ISB-NBER conference on Economic Policy and the Indian Economy

- Examined the role of banks in capital misallocation and structural transformation in India using census, bank branch and firm data
- Conducted *regression-discontinuity* analysis to study the causal effect of a private bank expansion policy on firms and labor
- Found that on average, firms in treated districts increased physical capital by 20.7% and pay wages 14.1% more than those in control
- Showed that reform reduced capital misallocation and facilitated structural transformation in heterogeneous effect regression

Religiosity and Firm productivity, Evidence from Firms in India

- Analyzed effects of religious beliefs of households on firm productivity using 10M+ consumer and firm data (Python, R, STATA)
- Measured religiosity using local food consumption data via Revealed Preference approach and geo-visualization (GIS, R)
- Structurally estimated firm productivity using Control Function and two-stage iterative Generalized Method of Moments (Matlab)
- Conducted *diff-in-diff* analysis to estimate causal effect of local religiosity on firm productivity using a quasi-random exposure to Ram Rath Yatra campaign in 1990 as the treatment
