## Fields of Specialization

Macroeconomics, Monetary Economics

## Job Market Paper

### **The Inflation Target and the Equilibrium Real Rate**

*Many economists have proposed raising the inflation target to reduce the probability of hitting the zero lower bound. It is believed that raising the inflation target will not affect the equilibrium real rate. I demonstrate that once we incorporate agent heterogeneity into a standard New Keynesian model, raising the inflation target will lower the equilibrium real rate. In a calibrated model, I find that a rise in the inflation target of 2p.p. generates a fall of between [0.1]p.p. and [0.8]p.p. in the equilibrium real rate. This implies that a rise in the inflation target will raise the average nominal interest rate by less than 2p.p. and thus reduce the probability of hitting the effective lower bound by less than expected.*

## Other Working Papers

### **An Alternative Behavioral New Keynesian Model**

*Gabaix argues that sparse dynamic programming can resolve paradoxes in the New Keynesian model. I demonstrate that some of his results hold only because the consumer never fully learns. Once we allow for the consumer to fully learn, however slowly, passive monetary policy can never be determinate and there is no bound to the impact of a persistent negative rate shock.*

### **Equilibrium in a Generalized Overlapping Generations Framework**

*I investigate the equilibrium of a generalized overlapping generations model with any number of cohorts and monopolistic competition. I demonstrate that there is typically a unique steady state and that any steady state has a positive equilibrium real rate and no asset bubbles. This contrasts to the classical case where there are often multiple equilibria with negative real rates or asset bubbles. I also provide results on how the equilibrium real rate responds to changes in the structural parameters of the economy.*

### **Macroeconomic Revisions as Shocks** (with Emi Nakamura and Jón Steinsson)

*Recent work has attempted to make use of macroeconomic revisions as economic shocks to policy and beliefs. We demonstrate that, although this approach might appear promising, omitted variable bias and the endogeneity of revisions themselves implies this approach is, unfortunately, uninformative about the sources of business cycles. Similar concerns arise in the context of using revisions as shocks in other contexts.*

## Work in Progress

### **Big Data Evidence on Information Acquisition**

*I analyse the extent of learning following shocks using novel data on website access. I analyse the extent to which*

*internet users access individual Wikipedia pages and overall website domains. I assess which categories of pages become more or less popular following shocks. I am able to determine which types of information agents choose to read about and whether they choose to learn for the future.*

## Fellowships and Awards

Dissertation Fellowship, Columbia University, 2018-2019  
Dean's Fellowship, 2013-2018  
Vickrey Prize, 2016 (runner-up, best 3rd year paper)  
Harriss Prize, 2015 (runner-up, best 2nd year paper)  
Jean-Jacques Laffont Scholarship, Toulouse School of Economics, 2012-2013  
University of Toulouse 'Prix d'Excellence', 2012

## Fields of Specialization:

*Primary Field:* Banking Theory, Financial Intermediation

*Secondary Field:* Corporate Finance

**Job Market Paper:** *Regulating Shadow Banks: Financial Innovation versus Systemic Risk.*

*Abstract:* Why are shadow banks unregulated and what is the optimal shadow bank regulation? I propose a model to investigate macro-prudential regulation when shadow banking sector accommodates both beneficial innovation and systemic risk. In the model, banks endogenously choose between lending to readily available safe and bad risky projects (“traditional banks”) and conducting costly financial innovation to produce good risky assets (“innovative banks”). An unregulated sector fosters innovation but induces regulatory arbitrage by traditional banks, which gain an unfair advantage in competition, crowding out innovative banks and increasing systemic risk. I show that regulatory threat through supervision and punishment has a deterrence effect on excessive risky-taking. The credibility and effectiveness of regulatory threat rely on data-collection power and punishment flexibility, highlighting the desirability of the Financial Stability Oversight Council (FSOC) as a prudential regulator.

## **Working Papers:**

*To Float or Not to Float? A Model of Money Market Fund Reform.*

*Abstract:* Is the floating net asset value (NAV) more stabilizing than a fixed one for prime money market funds? This paper shows that the floating NAV may lead to more self-fulfilling runs. In a coordination game with imperfect information, the change from stable NAV to floating NAV increases the precision of public signal, leading to multiplicity as in Angeletos and Werning (2006). Moreover, floating NAV increases the value of private information and induces more information acquisition than optimal. I show that constraints on investors' information acquisition capacity could reverse the effect when constrained investors shift to the outside option (safe deposits). The implications are consistent with a surge in conversion from prime funds into government funds right before the reform was implemented in 2016.

*Optimal Deposit Insurance Coverage Limit.*

*Abstract:* Why aren't deposits fully insured? I examine the optimal level of deposit insurance coverage limit in a model with both self-fulfilling and fundamental-driven bank runs and highlight the bank profitability channel of insurance costs. An increase in the insurance cap lowers the probability of self-fulfilling runs, but raises the payout cost when a bank run does occur. Interestingly, a self-funded deposit insurance may charge a higher premium on banks, which erodes banks' profits and makes them more vulnerable to runs, especially when interest rate spread is narrow. Fiscal externalities enter into the tradeoff when the optimal deposit insurance requires "leaning against the wind".

## Job Market Paper:

### “Downward Nominal Wage Rigidity in the United States”

**Abstract:** This paper uses the US nationally representative household survey, the Current Population Survey (1979-2017) and the Survey of Income and Program Participation (1984-2013), to establish the existence and cyclical pattern of downward nominal wage rigidity in the United States. The distribution of year-over-year changes in nominal hourly wages of individual workers, which is highly asymmetric with a large spike at zero-changes and fewer wage cuts than increases, also exhibits a notable cyclical pattern. The share of workers with no wage changes, which corresponds to the spike at zero, has greater countercyclical fluctuations compared to the share of workers with wage cuts. During recessions, employment as well as the share of workers with wage increases decline, both moving pro-cyclically. On the other hand, among the workers without wage increases, 67% of them experience no wage change, showing a larger countercyclical movement compared to the share of workers with wage cuts. This finding, previously unnoted in the literature on nominal wage rigidity, suggests downward nominal wage rigidity and its importance during recessions, with implications for employment. Under this light, I provide a different interpretation of the findings by Beraja, Hurst, and Ospina (2018), who

argue wages are rather flexible using state-level wage variations. I show that US states with the greatest decline in employment during the Great Recession experienced the largest increases in the share of workers with no wage changes suggesting that wages are rather inflexible. To fix ideas, I compare heterogeneous agent models with five different wage-setting schemes—perfectly flexible, Calvo, long-term contracts, menu costs, and downward nominal wage rigidity—and show that only the model with downward nominal wage rigidity is consistent with the empirical findings regarding the shape and cyclicalities of the wage change distribution.

## Job Market Paper:

*“What Price Index Should Central Banks Target? An Open Economy Analysis”*

Abstract: There is currently a debate over the choice of the price index that central banks should target when economies are open and exposed to international price shocks. This paper derives the optimal price index by solving the Ramsey problem in a New Keynesian Small Open Economy model with an arbitrary number of sectors. Qualitatively, I compare its analytical expression with other popular indices such as the producer price index and the core/headline consumer price index, providing intuitive explanations of why targeting those indices is suboptimal. Quantitatively, I calibrate a 35-sector version of the model for 40 countries and show that stabilization of the optimal price index yields significantly higher welfare than that of alternative indices.

Vickrey Prize for Best 3 <sup>rd</sup> Year Paper ( <i>Runner-Up</i> ), Columbia University	2017
Dean's Fellowship, Columbia University	2014-2018
High Honors, Department of Economics, University of California, Berkeley	2014
Honors, Department of Mathematics, University of California, Berkeley	2014
Phi Beta Kappa, University of California, Berkeley	2014

## Econometrics and Statistics:

Linear and non-linear regression with panel and time-series data, factor and asset pricing models, ARMA and GARCH, state space modeling and Kalman filtering, vector auto-regressions, yield curve modeling, principal components analysis, Monte Carlo methods, supervised learning methods (Lasso, ridge regression, elastic net, and random forests using Scikit-learn), elementary artificial neural networks (perceptron/feed-forward and long short-term memory using Keras)

## Programming Experience:

Python, R, Matlab, Stata, Latex

**Fields:** International Finance, Finance, Macroeconomics

## Job Market Paper:

*Intermediary-Based Asset Pricing and the Cross-Sections of Exchange Rates*

Abstract: I investigate whether fluctuations in the capital ratio of financial intermediaries provide an economic source of risk for the various cross-sections of exchange rate returns. I find that intermediary capital significantly prices the carry trade and the joint cross-section of a variety of currency portfolios, signifying the relevance of financial intermediaries as a fundamental economic source of global risk. I show that intermediary capital risk is a component of the previously identified high-minus-low (HML) carry factor of Lustig, Roussanov, and Verdelhan (2011), shedding light upon the economic sources of risk contained within this global risk factor. In addition, I show that intermediary capital serves as a relevant factor for the pricing of exchange rate risk when compared with the dollar and global dollar factors identified by Verdelhan (2018), shares common variation with the latter, and that the global dollar factor purged of US-specific risk helps price the full cross-section of foreign exchange portfolios.

## Working Papers:

### *International Bank Lending and the October 2016 US Money Market Fund Reform*

Abstract: US money market funds have been a key source of dollar funding for foreign banks. I examine whether the contraction of funding from prime funds due to the October 2016 US money market fund reform affected syndicated international bank lending by foreign banks. I find that despite the large drop in funding from prime funds, partially offset by funding from government funds, the reform had no effect on the composition or volume of dollar lending. This is suggestive of foreign banks' ability to substitute for dollar funding from other sources, in line with anecdotal evidence from the BIS (2017).

### *The Role of Dollar Funding and US Monetary Policy in International Bank Lending*

Abstract: Given the dollar's dominant role in international lending, I examine whether shocks to US monetary policy as measured by high frequency identification affect international lending by global banks, contingent on their reliance on dollar funding. I find that contractionary monetary policy shocks in the previous quarter decrease international lending growth after controlling for confounding borrower demand shocks by utilizing borrower-country-quarter fixed effects à la Khwaja and Mian (2008). This effect is increasing in the fraction of dollar denominated liabilities in the lender country's banking system, a proxy for reliance on dollar denominated funding. This result remains robust to controls and sector fixed effects and I find that results are driven by a decline in lending to non-bank private sector and banking sector counterparties.

### *A Bank-Level Analysis of the Bank-Sovereign Nexus* (joint with Romain Bouis)

Abstract: We identify an unconditional negative relationship between banks' holdings of government securities and credit growth across a wide panel of banks across 20 years and over 150 countries. We find that this aspect of the bank-sovereign nexus is primarily attributed to portfolio rebalancing rather than crowding out due to moral suasion. Banks substitute away from loans towards holdings of government securities at times of distress precisely when non-performing loan ratios are high, an indication of poor quality of available lending projects and borrowers. Using system GMM, we show that banks increase their holdings of government securities following years of high NPL ratios and are more profitable in the year following this increase in holdings, suggestive of optimal rebalancing.

## Work Experience:

Fund Internship Program, International Monetary Fund, African Department Regional Studies Division 2018

- Estimated cross-sectional time-series models on an international panel of banks spanning 20 years and over 150 countries to identify the unconditional relationship between bank lending and holdings of government securities and highlight portfolio rebalancing as the primary driver in contrast to moral suasion.
- Estimated dynamic panel models using system GMM to show evidence of portfolio rebalancing motives for banks' holdings of government securities and the related impact on profitability.
- Culminated in two presentations in the African Department's Financial Networks seminar series and a working paper, *A Bank-Level Analysis of the Bank-Sovereign Nexus*, to be submitted to the IMF Working Papers series.

Ph.D Summer Intern, Barings, Emerging Market Debt 2017

- Identified and estimated parsimonious, country-specific, linear factor models for prediction of EM equity index returns using lagged macro-fundamentals, exchange rates, and commodity prices as predictors, employing a self-designed, systematic model selection rule.
- Examined lead-lag relationships among EM equities, CDS, FX, local currency, and hard currency bonds at the country level and back-tested automated trading strategies based on estimates.
- Constructed and back-tested automated trading strategies using signals based on EM team's past portfolio changes in bond and FX positions to examine whether fundamentals views on country bond and FX returns could have also translated into returns in equities.

## Job Market Paper

“Zombie Firms and Political Capture of Bank Lending”

*Zombie firms (indebted firms that are unprofitable and depend on banks or government bailouts for continued operation) are costly. The existence of zombie firms has been attributed to banks continuing to provide forbearance lending in their own interests. However, in the contexts of developing economies, local government, alongside banks, may be contributing to keeping zombie firms alive. Studying loans in China, I examine how bank lending is captured and tracks the appointment cycle of local government officials. I find that there is significant targeting of firms, with bank lending to zombie firms dramatically increases in the last service year of local government officials and exhibits a significant increasing trend across the appointment cycle. I also show that capture is selective: although local government officials may pressure small local banks to lend to unprofitable firms, their ability to capture large nationally operated banks is relatively limited.*

## Working Papers

“Privatization and Enterprise Performance in China: Evidence from China’s State-Owned Enterprises Reform”

*The ownership structure of China’s state-owned enterprises (SOEs) has changed dramatically over the past two decades through ownership privatization. Studies on the effect of privatization on enterprise performance are usually subject to selection bias and endogeneity problem. Based on a panel data of*

*SOEs from 1998 to 2004, this paper uses fixed effects model and propensity score matching method to estimate the effect of privatization on enterprise performance, controlling for both time-invariant and time-variant enterprise characteristics. It also uses the exogenous demarcation of the Economic and Technological Development Zones where the enterprises locate as identification strategy. In addition, it distinguishes the average effect and contemporaneous effect of each round of privatization. Within the sample, privatization leads to an overall increase in productivity, profitability, and innovation activity. Privatization reduces employment contemporaneously, but enlarges the operation scale in the long run. The gain in profitability mainly comes from the reduction in administrative expenses.*

#### **“Export Subsidies and Quality Upgrading: Evidence from Chinese Manufacturing Firms”**

*Although it is well acknowledged that export subsidy is an effective way to prompt the scale of export, its effect on the quality of products of the export firms is less evident. This paper examines the effect of export subsidy on firm's quality upgrading behavior in the context of China. To avoid potential endogeneity problem, the empirical analysis benefits from exogenous variations in export tax rebate program induced by government fiscal burden during the period of 2000 to 2006. Analyses using panel data at the product level show that export subsidy, or export tax rebate has a positive on product quality, product price and investment in advertisement, R&D activities, and human capital accumulation, which are closely related to product quality. After controlling for destination country characteristics from the demand side, export subsidy and firm characteristics from the supply side still have explanatory power on product quality. In addition, the quality effect of export subsidy is more significant for foreign-invested firms and technology intensive firms.*

#### **“Productivity Differences Across Cities: The Effect of City Size and Intermediate Input Linkages”**

*To examine the reasons behind the geographical dispersion of firm productivity across cities of different sizes, I study three mechanisms through which city size affects the productivity distribution: firm selection, agglomeration externalities, and intermediate input linkages. I develop a model which characterizes the role of each mechanism in shaping the productivity distribution in a city: left truncation and rightward shift. The quantile regression analysis, based on the dataset on Chinese manufacturing firms, shows that as city size increases, the resulting stronger selection effect moves the left truncation point to the right. Meanwhile, both the benefit from local intermediate input sector and agglomeration externalities in larger cities can mitigate this selection effect and right-shift the productivity distribution.*

## Job Market Paper:

*Clustered Sovereign Defaults*

Abstract: Clustered sovereign defaults are a recurring phenomenon. In order to understand the nature of shocks and the mechanism through which these shocks lead countries to clustered defaults, the paper starts with a joint estimation of the structural parameters driving the output process of 24 defaulting countries and a process for the world interest rate. The postulated output process includes transitory and permanent global components as well as transitory and permanent country-specific components. The paper then builds a sovereign default model augmented with financial frictions at the firm level. In spite of the fact that the shocks are estimated independently of the model or of default data, once fed into the model, they reproduce the clustered default of 1982, providing a joint validation of the model and the estimated driving forces. The model predicts that it is the global shocks to the transitory component of output that are most important in leading countries to default in clusters. Contrary to what is commonly believed, the Volcker interest-rate hike was not a determinant factor of the 1982 developing country debt crisis.

## Working papers

### Schooling Expansion and Marriage Market: Evidence from Indonesia

*Abstract:* This paper seeks to investigate how education distribution shock affects household formation: the gains from marriage, who marries, and who marries whom. Between 1973/1974 and 1978/1979, Indonesian government constructed 61,807 primary schools across the country, which increased the primary school enrollment rate among children aged 7 to 12 from 69 percent in 1973 to 83 percent by 1978. Since females marry at a younger age than males, the program affected females would be first observed in marriage market, which would create a transitory period of marriage markets where female education increases but not males. Taking advantage of the variation in treatment intensity among different regencies (*kabupaten*) as used in (Duflo, 2001), the number of primary schools constructed per 1000 children between 5 and 14 in this program, I find that treated females tend to marry younger and age difference (defined as the difference between husband's and wife's age) increases. Single rate of lower educated

females and higher educated males decreases. I then build an OLG matching model incorporating marriage age as a decision to explain the findings.

### **Multidimensional Matching: Hukou Status in the Marriage Market**

winner of the Vickrey Prize for best third year paper

*Abstract:* I develop a two-dimensional matching model on marriage market in China, where individuals are characterized by a continuous trait (e.g. socioeconomic status) and a discrete attribute (hukou status). Surplus gain from marriage depends on the discrete characteristics with the rationale that (1) a urban *hukou* is much more valuable than a rural *hukou* and (2) it's harder for a husband to move to wife's place and (3) a limited quota of *hukou* change is available upon marriage. I show that a stable match always exists but may fail to be pure, and derive some properties. I then further specify the model by assuming a quadratic surplus function. In that case, closed form stable matching can be fully characterized. Using China 1990 1% sample census, and proxying socioeconomic status by educational attainment, model predictions are validated. There are fewer across-*hukou* type marriages and even fewer rural husband-urban wife match. Matching is assortative on education within each marriage type. Urban husbands with rural wives have on average fewer schooling years than those with urban wives.

### **Work in Progress**

#### **Gender Norm, Labor Supply and Marriage Market**

*Abstract:* Previous studies have found a sharp mass decline to the right of  $\frac{1}{2}$  in the probability density function of wife income share within household. Incorporating this “gender norm” into a household model, I found a testable prediction on labor supply: male labor supply is decreasing with wife’s wage when her potential wage is lower than his, however, it’s going to increase with wife’s wage when her potential wage is higher than his. With this micro-founded marital surplus, I then introduce a matching model on potential wages, which still predicts positive assortative matching on wages.

#### **What I Missed: Marriage Outcomes of Sent-Down Youth in China, with Lu Liu**

*Abstract:* During 1966 and 1978 in China, 17 million youth were sent down to countryside. Using a dataset on monozygotic twins in China, we analyzed the impact of this experience on their future marriage outcomes. We found an insignificant impact on females but for males: three years’ sent-down experience increased first marriage age by 0.384 years and decreased spousal consumption share by 30%.

## Job Market Paper

### Urban Density and Welfare

*In this paper, I study the implications of zoning for urban density and the welfare of city residents by exploiting a national policy in China that requires every residential building to receive two hours of sunshine a day in winter. The policy creates plausibly exogenous variation in density across latitudes, as northern cities where the solar elevation angle is smaller face more stringent density constraints. I show that restrictive zoning leads to less vibrant neighborhoods. Guided by a model, I decompose the welfare impacts of the policy into its effects on housing prices and consumers' market access to local non-tradables.*

## Working Papers

### From Internet to Social Safety Net: The Policy Consequences of Online Participation in China

Under review, with Junyan Jiang and Tianguang Meng

*In recent years, Internet-based platforms are increasingly being adopted by governments around the world to facilitate public engagement with citizens. However, it remains an open question whether participation through these platforms can actually enable citizens to influence policies. We address this question by studying the patterns and consequences of online participation at a major electronic petition platform in China, a country with the world's largest Internet-using population. Content analysis of over 900,000 petitions reveals that a substantial share of them concern lower-class issues and are originated from less developed rural and suburban areas. Linking variations in petition volumes to an original dataset of government policy priorities, we further show that online participation led governments to place greater emphasis on social welfare policies and to increase the coverage of a key low-income assistance program. These results suggest that online participation has the potential to improve the quality of governance even in an authoritarian regime.*

### **Do Market-oriented Reforms Explain China's Economic Growth?**

with Amit Khandelwal, Suresh Naidu and Heiwai Tang

*Many analysts attribute China's economic performance to its shift towards market reforms. We apply natural language processing methods to analyze a comprehensive corpus of 1.4 million legal documents issued by the national and provincial governments since 1949. We first document several patterns: (1) the Chinese government has constantly nullified existing laws, especially after 2000; (2) Relative to national legal documents, provincial-level documents have been issued at a faster rate; (3) the share of laws on economics-related issues has been gradually declining. We then quantify the degree of market orientation of China's policies using word embedding techniques, and relate them to provincial economic growth and other macroeconomic outcomes. Preliminary empirical results show that only a small part of provincial economic and foreign direct investment growth can be explained by the focus on neoliberal ideas and reforms in the country's laws and regulations.*

## Job Market Paper

---

“Optimal Dynamic Information Acquisition.”

Latest Version: <https://goo.gl/xCg6R1>, Supplemental Material: <https://goo.gl/hzrzac>

*Abstract:* In this paper, I study a dynamic model in which a decision maker (DM) acquires information prior to making her decision. The key feature of the model is the flexibility of information: the DM can choose any dynamic signal process as an information source, subject to a flow cost that depends on the informativeness of signal. The optimal strategy is to seek for an informative signal arriving as a *Poisson process*. At the optimum, the arrival of signal *confirms prior belief* and leads to *immediate action*. The optimal signal has *increasing precision* and *decreasing frequency* over time.

## Research Papers

### Published Papers

“Auction with Limited Commitment.” with Qingmin Liu, Konrad Mierendorff and Xianwen Shi.  
*American Economics Review*, Forthcoming.

Latest Version: <https://goo.gl/8d2qgH>

*Short Abstract:* Auctioneer with limited commitment and many bidders can achieve only profit level of an efficient auction.

### Working Papers

“Time preference and information acquisition.”

Latest Version: <https://goo.gl/9aV6BD>, ArXiv: 1809.05120

*Short Abstract:* Poisson learning creates most dispersed decision time distribution.

“Indirect information measure and dynamic learning.”

Latest Version: <https://goo.gl/ZCGBDt>, ArXiv: 1809.00697

*Short Abstract:* Under indirect information measure from sequential cost minimization, Poisson

learning is the optimal dynamic learning strategy.

“Selling information.”

Latest Version: <https://goo.gl/6aRjZY>, ArXiv: 1809.06770

Short Abstract: Monopolistic seller of information should design a rich menu to optimally screen buyers holding private information.

### Work in Progress

“Lemonade from Lemons: Information Design and Adverse Selection.” with Navin Kartik

“Ratings-Guided Search.” with Yeon-Koo Che and Teddy Kim

## Professional Activities

---

### Referee

*Econometrica*, *Journal of Economic Theory*, *European Journal of Operational Research*

### Conference & Workshop Presentations

2017: *Warwick Economics PhD Conference (Warwick)*, *Econometrics Society Summer Meetings (Asian: CUHK; China: Wuhan; North American: WUSTL)*, *Midwest Economics Theory Conference (Kentucky)*, *SAET (Portugal)*, *Young Economists Symposium (Yale)*, *International Conference on Game Theory (Stony Brook)*

2018: *SITE Workshop in Dynamic Games (Stanford)*, *Econometrics Society Summer Meetings (China: Fudan; North American: UC Davis)*, *BEAT (Tsinghua)*, *International Conference on Game Theory (Stony Brook)*

### Organizer

2016: *Micro Theory Reading Group at Columbia Economics*

2017: *Micro Theory Colloquium at Columbia Economics*

## Research Experiences

---

### Research Assistantships

2014: Sylvain Chassang (Princeton University)

2015: Qingmin Liu (Columbia University), Navin Kartik (Columbia University)  
Marina Halac and Andrea Prat (Columbia Business School)

2016: Marina Halac and Pierre Yared (Columbia Business School)  
Yeon-Koo Che (Columbia University)

2017: Navin Kartik (Columbia University), Yeon-Koo Che (Columbia University)  
Marina Halac and Pierre Yared (Columbia Business School)

2018: Yeon-Koo Che (Columbia University)

## Teaching Experiences

---

### Graduate TA

2015: G5211 Microeconomics Analysis I, Pietro Ortoleva

2016: G6212 Microeconomics Analysis II, Patrick Bolton/ Navin Kartik  
G6410 Math Methods for Economists

2018: G6600 Market Design, Yeon-Koo Che

### Undergraduate TA

2014: W3211 Intermediate Micro, Jonathan Vogel

2015: W3211 Intermediate Micro, Pietro Ortoleva

## Honors and Awards

---

2018: Dissertation Fellowship, Columbia University (-2019)

2016: Wueller Pre Dissertation Award for Best Proposal, Columbia University

2013: Dean's Fellowship, Columbia University (-2018)

## Education

2019 (expected)	Ph.D.	Economics	Columbia University
2013	M.Phil.	Economics	University of Oxford
2010	B.A.	Economics	Columbia University

## Honors and Awards

2015-2016, Dissertation Fellowship, Department of Economics, Columbia University  
2013-2018, Dean's Fellowship, Columbia University  
2011-2013, Clarendon Scholarship, University of Oxford  
2006-2010, Kluge Scholarship, Columbia University

## Fields of Specialization

Macroeconomics, Behavioral Macro

## Job Market Paper

### *Deeper Habits*

Inertia in consumption is a well-established fact both at the aggregate and at the individual goods level. Whether inertia results from habits or costs, however, remains an open question. We use an experimental approach to distinguish between the two. In an experiment that replicates the consumption/savings problem we find that our subjects exhibit inertia even when their objective is time-separable and there are no external switching costs. We argue that consumers condition on past actions as a way of economizing on cognitive resources. We develop a model of “rationally inattentive reconsideration” and estimate the costs of inertia in our set-up to be around one percent of consumption.

## Research Experience

2016 – 2017 Research Assistant for Michael Woodford  
2014 – 2015 Research Assistant for Emi Nakamura, Jon Steinsson and Enrichetta Ravina  
2011 Research Associate, Federal Reserve Bank of San Francisco

## Teaching Experience

### *Instructor*

Summer 2016, Uncertainty and Information

### *Teaching Assistant*

Fall 2017, Cognitive Mechanisms and Economic Behavior: Prof. Michael Woodford  
Spring 2016, Intermediate Macroeconomics: Prof. Martin Uribe  
Fall 2015, Macroeconomics I for MA: Ron Miller  
Fall 2014, Intermediate Macroeconomics: Prof. Ricardo Reis
